GCC Installation Guide

The installation procedures for GCC (GNU Compiler Collection) are different for Linux and macOS. First check the GCC version on your operating system.

```
$ gcc --version
```

parKVFinder supports GCC versions later than 6. Otherwise, you must install a newer GCC version.

Linux

To install the standard available version of GCC on your operating system, type:

```
$ sudo apt install gcc
```

Note: check the GCC version again to make sure you have installed a version later than 6.

If the default version GCC is not later than 6, you can install directly any later version by typing:

```
# GCC version 6
$ sudo apt install gcc-6
# GCC version 7
$ sudo apt install gcc-7
# GCC version 8
$ sudo apt install gcc-8
# GCC version 9
$ sudo apt install gcc-9
```

Then, there are two possible paths to prepare GCC to compile the parKVFinder source code.

• Create a symbolic link to your custom GCC

```
$ sudo ln -s /usr/bin/gcc-X /usr/local/bin/gcc
```

Note: **X** is the version of GCC you have installed.

• Replace GCC to gcc-X in Makefile within the parKVFinder directory

macOS

The macOS native C compiler is Clang LLVM compiler, which is not supported by parKVFinder.

First, you need to install: * Homebrew package manager; * Command Line Tools (CLT) for Xcode (xcode-select --install) or Xcode.

To install the standard available version of GCC on your *Homebrew* package manager, type:

\$ brew install gcc

Note: check the GCC version to make sure you have installed a version later than 6.

If the default version GCC is not later than 6, you can install directly any later version by typing:

```
# GCC version 6
$ brew install gcc06
# GCC version 7
$ brew install gcc07
# GCC version 8
$ brew install gcc08
# GCC version 9
$ brew install gcc09
```

Then, there are two possible paths to prepare GCC to compile the parKVFinder source code.

 $\bullet\,$ Create a symbolic link to your custom GCC

\$ sudo ln -s /usr/local/bin/gcc-X /usr/local/bin/gcc

 $Note \colon \mathbf{X}$ is the version of GCC you have installed.

• Replace GCC to gcc-X in Makefile within the parKVFinder directory
